

TRACKING HITCH ASSEMBLY UTILIZING TRACTOR
LIFT ARMS AS STABILIZERS

ABSTRACT OF THE DISCLOSURE

5

A tracking hitch assembly couples to the drawbar of the tractor in a conventional manner. To prevent the hitch from pivoting with respect to the drawbar, the hitch includes an adjustable hitch stabilizer which engages the lift arms of the tractor. When a pivoting force is exerted against the 10 hitch, one lift arm is placed in tension, and the other lift arm is placed in compression. Thus the hitch is prevented from pivoting with respect to the drawbar.
